The Business Story – Advance BI

Ann has created a BI Dashboard as per the business requirement along with you. Now there is a further requirement to enhance the dashboard with advanced BI features:

- **Variances**
- **Conditional Formatting**
- **Thresholds**
- **Reference Line**
- **Styling**
- **Smart Features – Assist, Insight, Predict, Discovery**

Requirement 1: Add variance to the chart (Comparing YoY Sales per Salesman)

Page Name	Overview
Data Source	Sales_Data_Model
Type	Chart
Chart Structure	Bar/Column
Measure	Order Value
Dimension	Sales Agent
Filters	NA
Variance	Time - Date A – Current Period B – Pervious Period

- Show the values in percentage
- Merge value with chart itself
- Filter Top 5 Sales Agents only

Requirement 2: Show Variance for the Count of Orders

Page Name	Overview
Data Source	Sales_Data_Model
Type	Chart
Chart Structure	Numeric Point
Primary Values	Number of Orders
Color	NA
Filters	NA
Variance	All measures in use A – Current Period B – Previous period

Requirement 3: Chart Conditional Formatting and threshold

- Create Threshold at Story level using  Conditional Formatting

Order Value Threshold	
Ok	>= 150000
Warning	>= 50000 and < 150000
Error	< 50000

- Apply the threshold at Measure level using **Story Defined option**
- Add a green color reference line with fixed value as 1,50,000

Requirement 4: Create a new bullet chart using the defined threshold

- Copy Chart **Order Value per Customer** and change to bullet
- Add Multiple conditional Threshold based on performance of the sales Person

Requirement 5: Table Style and Threshold

- Go to **styling panel** for the table and change the **template** to **Report-Styling**

Page Name	Overview
Data Source	Sales_Data_Model
Responsive Fixed Layout	Yes
Rows	Order Id Dimension
Columns	Select No of Meetings
New Threshold	>=30 – ok, 20-30 – warning, < 10 - error
Enable Explorer	No

- In styling panel, we can choose different options for Threshold value

Requirement 6: Linked Model with Custom Calculated Column & In-Cell Chart

*learn the concept of linked model (relationship)

*delink the page filter from a particular control using linked analysis option

Page Name	Overview
Data Source	Sales_Data_Target Sales_Data_Model
Linked	Product
Rows	Product
Columns	Target Unit Unit Sold
Filters	NA
Enable Explorer	No
NEW COLUMN	Delta = Unit_Sold – Target_Unit
Select Column	Add In-Cell Chart
Select Column Values	Add Variance

Requirement 7: Styling Options

- Add Logo
- Show Hide Scales, Filters etc.
- Change Background and Foreground colors
- Show Story Style Preferences
- Save As Template option

Exploring Smart Features of SAP Analytics Cloud

Explore 1: Augmented Analytics/Smart Assist/NLP Based Analytics

Ask following questions

1. Show Order Value
2. Show Order Value **by product**
3. Show Order Value by product **for last year**
4. Show Order Value by product **as a pie chart**

Adding the chart to the page

Explore 2: Smart Insights

Find out which **product** is the top contributor in the **Units Sold**

Which are the **customer segments** who contributes highest within the top product wise Unit Sold

Which **Country** dominates the sales for the **Top Unit** contributing Products

Explore 3: Smart Predict

Add a **Time Series** Chart for **Order Value per Date**

Apply **Smart Predict** for **Forecasting**

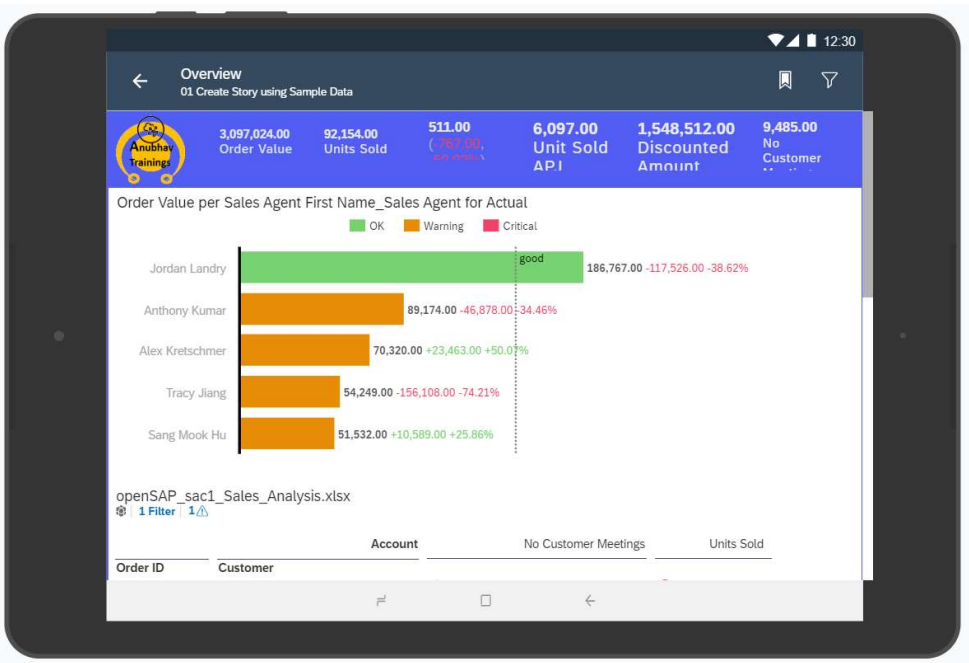

Explore 4: Smart Discovery

Build Complete **Dashboard** with just one click on **Order Value**

Explore 5: Collaboration and Responsive Capability

Explore 6: Explorer Feature – Enabling End users & Bookmark

EXERCISE 02 – ANUBHAV TRAININGS – SAP ANALYTICS CLOUD TRAINING

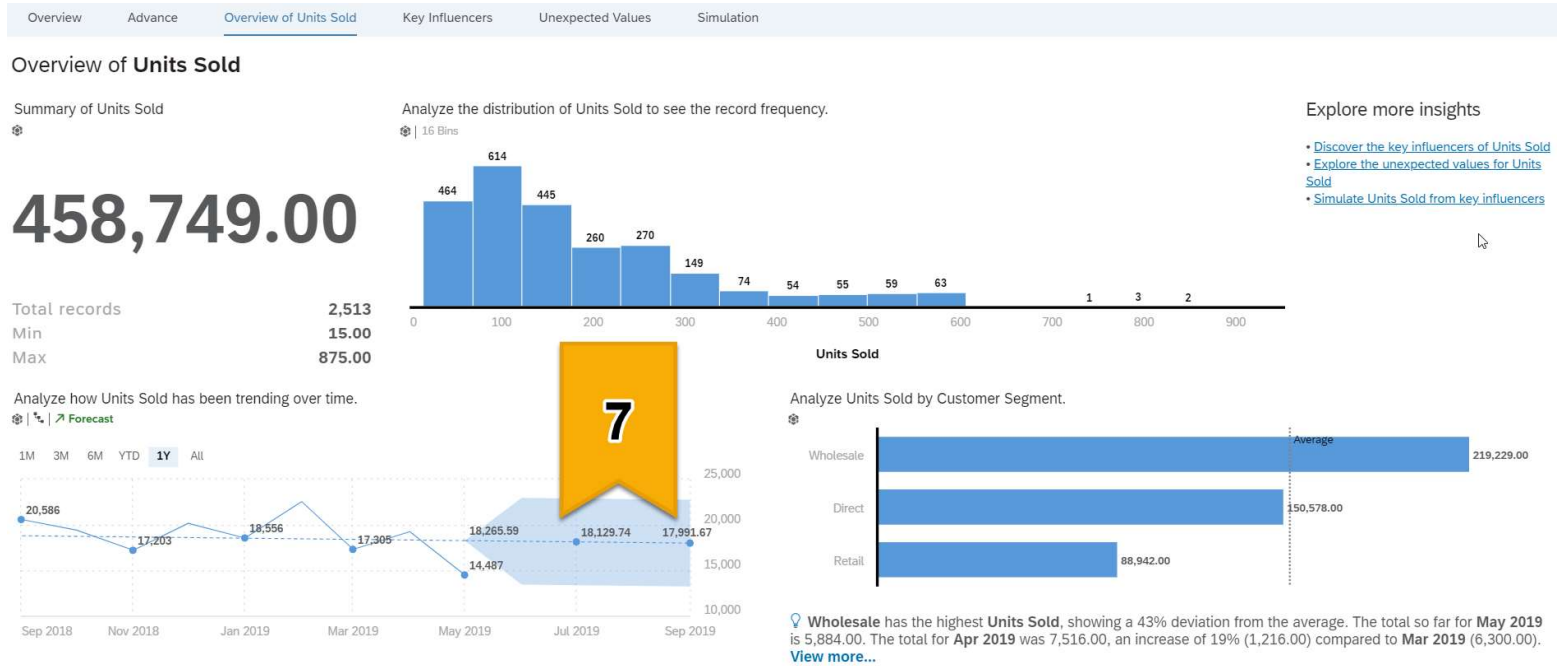

Created by: Anubhav Oberoy

System: SAP SAC Implementation project

Welcome back to Anubhav Trainings, hope you had a great session. In this **advance BI** exercise

The UI Mockup as below with total 7 Requirements

Requirement 1: Add Reference line for Order Value per Customer Status, Date for Actual

Page Name	Advance
Add Reference line Type	Dynamic
Measure	Order Value
Aggregation	Min
Label	Min

*Drill down and check that the line changes automatically.

Requirement 2: Add Bar Chart with Order Units Sold per Country (Top 5) and add variance for comparing by last year

Page Name	Advance
Data Source	Sales_Data_Model
Type	Chart
Chart Structure	Bar/Column (Vertical)
Measures	Unit Sold
Dimensions	Country
Filter	2019
Variance	All Measures (Previous Period)

Requirement 3: Chart Conditional Formatting and threshold for Unit Sold / Country

- Create Threshold at Story level using  Conditional Formatting

Order Value Threshold	
Ok	>= 1094
Error	< 50000

- Apply the threshold at Measure level using **Story Defined option**
- Add a green color reference line with fixed value as 1094

Requirement 4: Add New dynamic column Calculation AmountByPerformance in table

Page Name	Advance
Calculated Measure For High – 10% discount For Low – 5% discount	IF([d/"Sales Agent Performance"]='High', ["openSAP_sac1_Sales_Analysis.xlsx":Order_Value]*0.90, ["openSAP_sac1_Sales_Analysis.xlsx":Order_Value]*0.95)

Requirement 5: Add New Difference column and in-cell Chart

Page Name	Advance
Data Source	Sales_Data_Model
Type	Table
New Column	Substract (order Value – Amount By Performance)
In-Cell Chart	Yes

Requirement 6: Enable Smart Insight for Unit Sold and find the contribution of dimensions

Requirement 7: Explore the Smart Discovery for Units Sold and add them to pages
